Word Problems, pp. 49-50

Page 49

- There are five people in the family, so the total is 5. The problem to solve is $2 + \underline{\quad} = 5$.
There were three family members outside.
- The use of pictures is optional. It helps many children, though, and in the future—even in algebra word problems—it is a good tactic for solving the problems. Some of the problems are simple addition problems; some are missing addend problems. To distinguish between an addition and a missing addend problem, ask: is the problem *asking* for the total, or do you *already know* the total? Is the problem asking how many there are together, or is it asking how many are missing?

The student is not required to write an addition equation for these problems, but just give the answer.

- The problem asks for a total. They have 9 goldfish together. (The addition is $3 + 6 = 9$.)
- We know the total is 7. She needs to find 4 more hats. (The addition is $3 + \underline{4} = 7$.)
- The problem asks for a total. There are now 8 fish. (The addition is $4 + 4 = 8$.)
- We know the total is 9. Paul cannot find three cars. (The addition is $6 + \underline{3} = 9$.)

Page 50

- We know the total is 6. Two friends were not hiding. (The addition is $4 + \underline{2} = 6$.)
 - The problem asks for a total. She ate 6 cookies. (The addition is $2 + 4 = 6$.)

- $7 = 7$
 - $7 < 8$
 - $6 > 4$
 - $10 = 10$
 - $8 > 4$
 - $2 = 2$
 - $0 = 0$
 - $8 > 7$
 - $4 = 4$
 - $1 < 5$
 - $6 < 8$
 - $2 > 0$

- $3 + 1 = \underline{4}$
 $4 + 2 = \underline{6}$
 - $2 + 2 = \underline{4}$
 $1 + 4 = \underline{5}$
 - $3 + 1 = \underline{4}$
 $1 + 3 = \underline{4}$
 - $3 + 3 = \underline{6}$
 $1 + 5 = \underline{6}$

- Check the student's counting as they do the activity.
- The teacher needs to check the student's work. For example, to make 6 tens and 5 ones in (a), move six full rows of beads and five beads from the seventh row on the abacus.
- As above, check the student's work. A full row of beads should be moved for each ten, and the number of beads from the following row moved for the ones.

Puzzle Corner:

The illustration shows one hundred, one ten, and eight ones. 32 is three tens and two ones.

If you add the three tens and two ones to the original number, you will have one hundred, four tens, and ten ones, which is another whole ten. So now you have one hundred and five tens, which is 150.
